FORGE AI

Forge AI is an end-to-end AI product development service that takes ideas from conception to a Minimum Viable Product (MVP) stage—and beyond. Our goal is to validate your AI-driven ideas rapidly, iterate efficiently, and pivot strategically until we achieve Product-Market Fit (PMF).

OpenEnterprise AI

"Reduced turn around time for commercial insurance process by 80%"

SmartSurgn

"Slashed the go to market time by 50%"

Forge AI

xTransmatrix

OUR APPROACH

Ideation & Strategy

- Work closely with founders and teams to refine AI-driven ideas.
- Identify key pain points and target audience.
- Develop a strategic roadmap for product development.

Prototype & MVP Development

- Rapid prototyping to validate core assumptions.
- Build a functional MVP with a lean, scalable architecture.
- Ensure the product integrates seamlessly with existing workflows

User Validation & Feedback Loop

- Rapid prototyping to validate core assumptions.
- Build a functional MVP with a lean, scalable architecture.
- Ensure the product integrates seamlessly with existing workflows.

Scaling & PMF Alignment

- Optimize AI models and infrastructure for scale.
- Explore go-to-market strategies and growth channels.
- Continuously refine the product based on real-world adoption.

WHO IS THIS FOR?

Startups and **entrepreneurs** validating AI ideas.

Enterprises exploring AI-driven innovation.

Investors looking to de-risk **AI product** investments.

xTransmatrix

PERFORM AI

Perform AI is a specialized AI development service focused on building Gen AI-integrated products that are enterprise-grade, production-ready, and fully supported. We work with businesses that have a clear idea and roadmap, executing their vision with precision and scalability.

Synaptic Advisors

"Prompt to complete Salesforce app in minutes"

National Health Authority

"Democratizing healthcare for 1.4 billion people"

Open Network For Digital Commerc

“Delivered AI powered solution for Digital compliance and product safety”

OUR EXPERTISE

Digitization of Legacy Documents

Converting unstructured and paper-based documents into structured, searchable digital formats.

Implementing AI-driven OCR, NLP, and entity recognition solutions.

LLM + RAG-Based Chatbots

Developing AI-powered chatbots that integrate with structured and unstructured data

Enhancing user interactions with Retrieval-Augmented Generation (RAG) for context-aware responses.

Migration to Structured Databases

Transforming legacy data into structured databases for better accessibility and analytics.

Ensuring data integrity, scalability, and compliance with industry standards

AI Agents for Various Tasks

Automating complex workflows using intelligent AI agents.

Enabling decision-making, predictive analytics, and business process optimization.

WHY CHOOSE PERFORM AI?

Enterprise-Grade Quality : We build scalable and secure AI solutions tailored for production environments.

Deep AI & Data Expertise : Our team excels in AI model integration, data engineering, and automation.

Full Development & Support : From development to deployment and ongoing maintenance, we provide end-to-end support.

Seamless Integration : Ensuring AI solutions work flawlessly within existing enterprise ecosystems.

FOCUS ON AI DATA TAGGING & ANNOTATION

Our Data Tagging and Annotation Service provides high-quality, structured datasets for AI model training and fine-tuning. Whether it's image annotation, video labeling, speech transcription, or text classification, we offer human-in-the-loop feedback to ensure the accuracy and reliability of AI-driven automation. This is made possible by our large workforce of 50+ trained personnel, ensuring efficiency and scalability.

AI Data Tagging

“Safety first Voice AI for Health care

xTransmatrix

OUR EXPERTISE

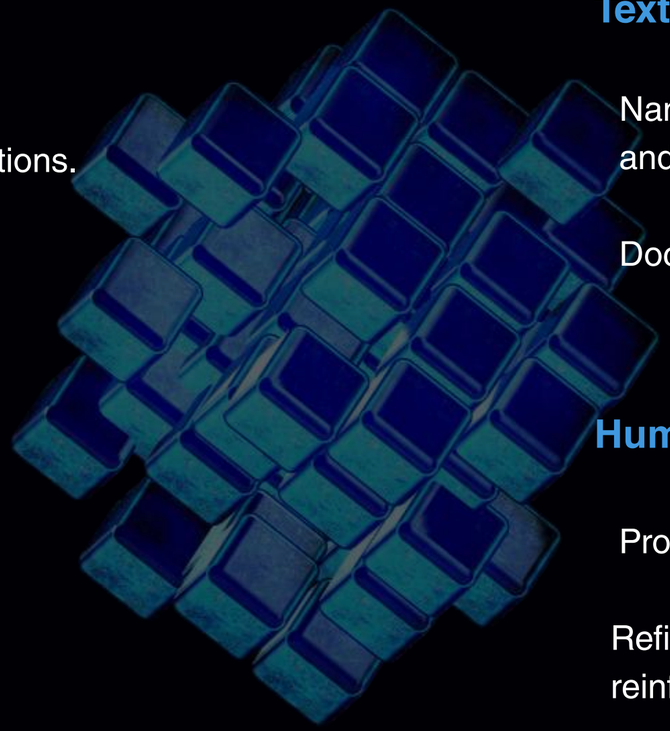

Image & Video Annotation

Object detection, segmentation, and classification.
Bounding box, keypoint, and polygon-based annotations.
Frame-by-frame video labeling for action recognition and object tracking.
Video scene segmentation and event detection.

Audio Transcription & Speech Processing

Manual and automated transcription for AI speech models.

Speaker identification, sentiment tagging, and language classification.

Text Labeling & NLP Training Data

Named entity recognition (NER), sentiment analysis, and intent classification.

Document tagging and chatbot training datasets.

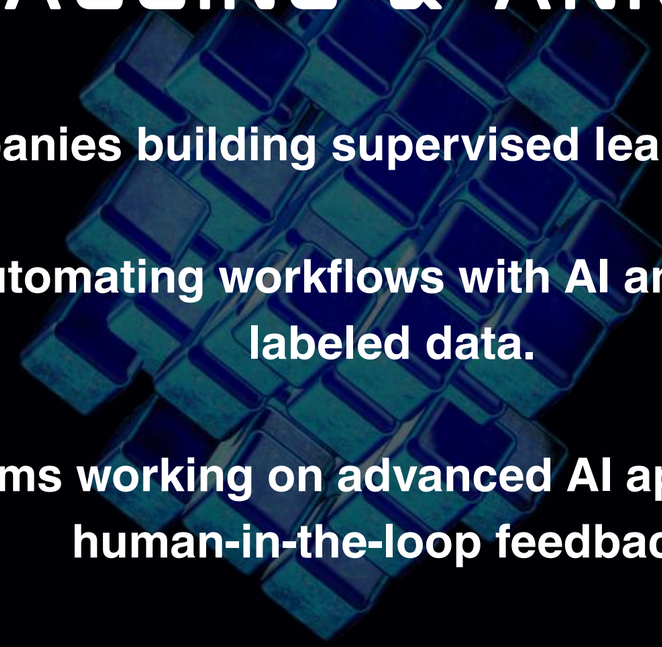

Human-in-the-Loop Feedback for AI Models

Providing human evaluation for AI-generated outputs.

Refining model accuracy through reinforcement learning from human feedback (RLHF).

AI Data Tagging

WHY CHOOSE FOCUS ON AI DATA TAGGING & ANNOTATION?

AI companies building supervised learning models.

Enterprises automating workflows with AI and requiring quality-labeled data.

Research teams working on advanced AI applications needing human-in-the-loop feedback.

CASE STUDY: SMART SURGN – AI-DRIVEN COMPLIANCE AUTOMATION IN MEDICAL DEVICE MANUFACTURING

SmartSurgn

"Slashed the got to market time by 50%"

Case Study

www.xtransmatrix.com

xTransmatrix

CHALLENGE

Smart Surgn, a medical device manufacturing company, faced significant delays in bringing products to market due to the complexity of compliance requirements across multiple countries. Each regulatory board had unique documentation standards, typically provided in PDF format. The process of manually curating and assembling proof documents for each country was labor-intensive, slowing down regulatory approvals.

SOLUTION

To automate and optimize compliance workflows, we implemented an AI-powered solution with the following capabilities:

nts for each country was labor-intensive, slowing down regulatory approvals.

xTransmatrix

SOLUTION

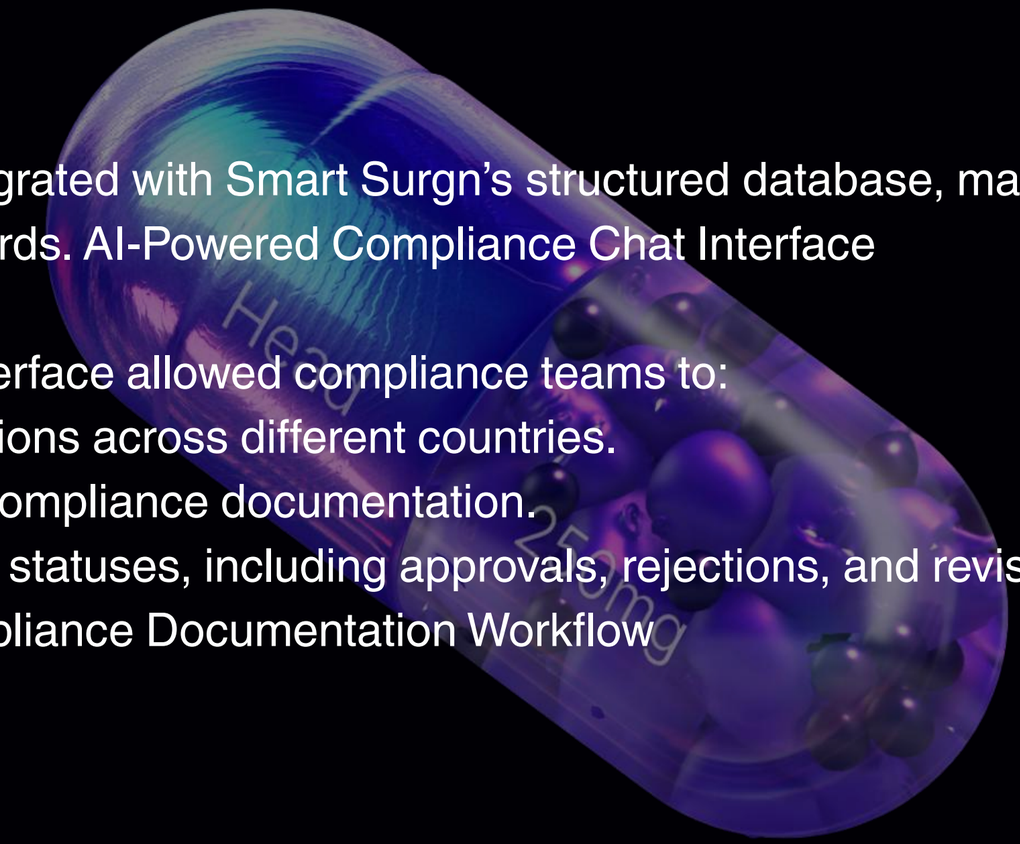

To automate and optimize compliance workflows, we implemented an AI-powered solution with the following capabilities:

Digitization & Structuring : All country-specific compliance regulations and requirements were digitized and processed. Data was structured and stored for easy access and analysis. Intelligent Retrieval with RAG.

The processed regulations were indexed in a vector database to enable efficient search and retrieval.
A fine-tuned Retrieval-Augmented Generation (RAG) pipeline powered by a Large Language Model (LLM) was developed to fetch and generate precise compliance information.
Integration with Structured Databases

SOLUTION

The system was integrated with Smart Surgn’s structured database, managing all compliance applications and submission records. AI-Powered Compliance Chat Interface

- A chat-based interface allowed compliance teams to:
- Compare regulations across different countries.
- Identify gaps in compliance documentation.
- Track application statuses, including approvals, rejections, and revision requests.
- Automated Compliance Documentation Workflow

xTransmatrix

SOLUTION

A document autofill feature was added, enabling teams to upload product information documents about a medical device.

The AI system would automatically populate relevant compliance sections using its knowledge base (RAG), significantly reducing manual input.

By leveraging AI to automate compliance workflows, Smart Surgen achieved:

- ✅ 50% reduction in go-to-market time
- ✅ Automated document preparation, reducing manual effort
- ✅ Faster and more accurate compliance decision-making
- ✅ Improved efficiency in tracking and managing submissions

THANK YOU
